

$$x_2 = -2x_1 + 1$$

$$x_2 = -\frac{1}{3}x_1 + \frac{1}{3}$$

$$\begin{array}{ccc} (-) & (+) & (-) \end{array}$$

$$0 = -\frac{5x_1}{3} + \frac{2}{3}$$

$$\frac{5x_1}{3} = \frac{2}{3}$$

$$\boxed{\therefore x_1 = \frac{2}{5}} \quad \& \quad x_2 = -\frac{4}{5} + 1 = \frac{1}{5} \quad \boxed{\therefore x_2 = \frac{1}{5}}$$
